ASSUMPTIONS AND METHODOLOGY: North Carolina National Guard Pension Fund

The cost estimates of the Fund’s Actuary are based on the employee data, actuarial assumptions and actuarial methods used to prepare the December 31, 2004 actuarial valuation of the fund. The data included 8,005 active members, 6,924 former members entitled to deferred benefits and 2,461 retired members in receipt of annual pensions totaling \$2.3 million. Significant actuarial assumptions used include (a) an investment return rate of 7.25%, (b) the 1979 George B. Buck Mortality Table for deaths after retirement and (c) rates of separation from active service based on Fund experience. The actuarial cost method used was the entry age method with open-end unfunded accrued liability and a frozen unfunded liquidation period of nine years. Detailed information concerning these assumptions and methods is shown in the actuary’s report, which is available upon request from Stanley Moore.
